

Environmental Policy

Basic Philosophy

As outlined in the Komatsu Earth and Environment Policy, Komatsu Ibaraki Plant will take the corporate social responsibility initiative to contribute to the conservation of the global environment, carbon neutrality, and the development of a sustainable local society through our business, which is the development and production of construction/mining equipment.

Course of Action

Everyone who works at the Komatsu Ibaraki Plant will be involved in the following activities.

1. [Environmental Risk Management]
Comply with laws and agreements regarding the environment and take all measures/actions to prevent environmental pollution.
2. [Environmental Contribution of Products]
Promote the research, development, and provision of products that consider the global environment.
3. [Saving Energy]
Continually work on reducing the amount of CO₂ emitted during business activities.
4. [Effective Use of Resources]
Promote resources-saving, effective use of water, and waste reduction as appropriate to a recycle-based society.
5. [Coexistence with the Local Community]
Work on activities tailored to the local community such as conservation of biodiversity.
6. [Continuous Improvement]
While promoting education and awareness building activities, effectively put into effect the environmental management system.

Furthermore, this environmental policy will be publicized outside the plant as needed.
