

Koriyama Plant Environmental Policy

Komatsu Koriyama Plant will consolidate the technology cultivated through the development and production of hydraulic equipment products to promote environmental conservation and resource protection activities which consider the plant site land and its surrounding areas. Furthermore, we will make it our philosophy to engage in business activities which include global perspectives.

Everyone who works at the Koriyama Plant will engage in the following activities.

1. We will comply with the laws and regulations concerning the environment, follow the Komatsu Earth and Environment Policy, and make efforts to prevent environmental pollution and conserve the natural environment.
2. We will set goals for improvement regarding the environment and make continuous improvement efforts.
3. Everyone who works at the Koriyama Plant will recognize the environmental impact of our business activities, and we will conduct education and training so that everyone will be able to take immediate action in case of an emergency.
4. We will continue to develop products which minimize environmental impact by capitalizing on our accumulated technology.
5. We will continuously work on Zero Emissions activities (further waste reduction and 100% recycling).
6. We will make continuous efforts to reduce the environmental impact of chemical substances (controlling and reducing chemical substances) used in our business activities.
7. We will promote the improvement of energy efficiency and our "greening plan" of the plant to respond to environmental needs and biodiversity.
8. We will make continuous, well-planned efforts to reduce CO₂ emissions and curb electric power consumption.
9. We will actively promote social contribution efforts for local communities.
10. All employees engage in business activities to achieve the sustainable society.

Toshiya Sakuda
Koriyama Plant Manager
