

FY2026

Oyama Area Environmental Policy

1. Basic Philosophy

At the Komatsu Oyama Site (comprising the Oyama Plant, Tochigi Plant, and on-site group companies), we strive to further enhance the technologies we have developed over the years and promote environmental conservation through product development and manufacturing. In addition to complying with the laws and regulations of the local communities where our sites are located, we pursue a balance between ecology (environmental friendliness) and economy (economic efficiency). Through our business activities, we aim to pass on a sound global environment to future generations and contribute to our corporate social responsibility and sustainable development.

2. Environmental Policy

- 1) We will engage in business activities in such a way that is in harmony and cooperation with the local residents.
- 2) We will comply with laws and regulations concerning the environment and contribute to society as a corporate group that can flexibly respond to changes in society and the external environment to create a prosperous future together with people, society, and the Earth.
- 3) In our regular operations, we will take into consideration the environmental impact and set goals and targets to continually engage in improvement activities.
- 4) We will promote resource-saving activities by developing environmentally friendly products, reforming production, improving energy efficiency, and increasing the rate of renewable energy use and recycling.
- 5) We will reduce waste emissions in our production activities and continue Zero Emissions activities to recycle and make effective use of the generated waste in an effort to build a recycling-oriented society.
- 6) Everyone who works in the Oyama area will become aware of the environmental impact of our business activities, and will conduct education-and –awareness-building activities regarding environmental conservation.
- 7) We will engage in priority environmental management, as we are fully aware of the fact that our usage of oils is the largest amount in the area. We will also promote stringent control of chemical substances.
- 8) We will recognize biodiversity as one of the key issues of the global environment, and make conservation efforts for the global environment.
- 9) Focusing on the Komatsu Mid-term Plan, we are advancing efforts relating to climate change, carbon neutrality, logistics efficiency within our premises, ESG issues and the SDGs as efforts to address these issues have accelerated worldwide.

Go Kamada
Executive Officer and Oyama Plant Manager
