

Techno Center Environmental Policy

Corporate Principles

Based on Komatsu's Environmental Policy, the Komatsu Techno Center is committed to contributing to the realization of a sustainable society by pursuing a balance between ecology (environmental conservation) and economy (economic efficiency).

The Center provides customers with cutting-edge technologies and information developed by Komatsu, and works together with them to reduce environmental impact through training on machine knowledge and operation techniques.

Through these activities, we aim to help protect the global environment and contribute to building a prosperous future.

Guidelines for Corporate Activity

1. We will comply with laws and regulations relating to the environment and work on environmental conservation and preventing environmental pollution.
2. We will provide instruction in operating techniques for construction machinery to improve productivity and reduce environmental impact.
3. We will actively participate in environmental conservation programs in local communities.
4. We will engage in environmental conservation programs that contribute to biodiversity.
