

Field Testing Department Test Engineering Center Environmental Policy

1. Basic Philosophy

Komatsu Test Engineering Center will actively promote environmental conservation which considers the local community and anticipates future scenarios, including customer and competitor trends, while engaging in business activities from global environmental perspectives by converging the technologies accumulated in testing construction equipment. In this manner, we will contribute to building a sustainable society.

2. Environmental Policy

- 2.1 We will comply with environmental laws and related agreements, and, in accordance with the Komatsu Earth Environmental Policy, engage in activities to prevent pollution and protect the environment.
- 2.2 We will engage in our business activities in harmony and cooperation with the local residents.
- 2.3 We will challenge the development of new technologies and choose sustainable products and services to achieve carbon neutrality and advance climate change mitigation and adaptation.
- 2.4 Everyone who works at the Test Engineering Center will recognize the environmental impact of our business activities and, with a high awareness of energy conservation, will conduct education, enlightenment activities, and equipment installation related to environmental conservation.
- 2.5 We will define our objectives and goals and make continuous efforts for improvement.
- 2.6 As our business is closely related to the natural environment which surrounds our test field, we will make environmental conservation efforts by engaging in biodiversity activities.
